REASON FOR ALLOWANCE

1. Goldie discloses a device for servicing vehicles having tires or a method of removing a tire, the device comprising a jack for inserting under the tire, the fork having a first working end and a second end; a handle having a first end mounted to the second end of the jack and a second free end; an axle mounted to the jack; a first wheel and a second wheel rotatably mounted on the axle; a spring assembly (12a, 28) having a first end attached to an arm member which connected to the axle and a second end. Kirk discloses a lifting device comprising a fork having first, second and third segment. Kazmark and Misawa disclose various types of servicing device comprising a third wheel which is rotatably mounted to the lifting device using arm members. However, none of the references of record suggests a device for servicing vehicle tires wherein a third wheel is mounted to the axle by a spring, whereby the device further comprising a first and second sets of gussets mounted beneath the fork so as to provide a set of gap beneath the fork in the manner defined in the instant claim 1 and in combination with other limitations of the claims. Therefore, claims 2, 4-20, depending therefrom, are considered to be allowable.
